

Design layout and infrastructure

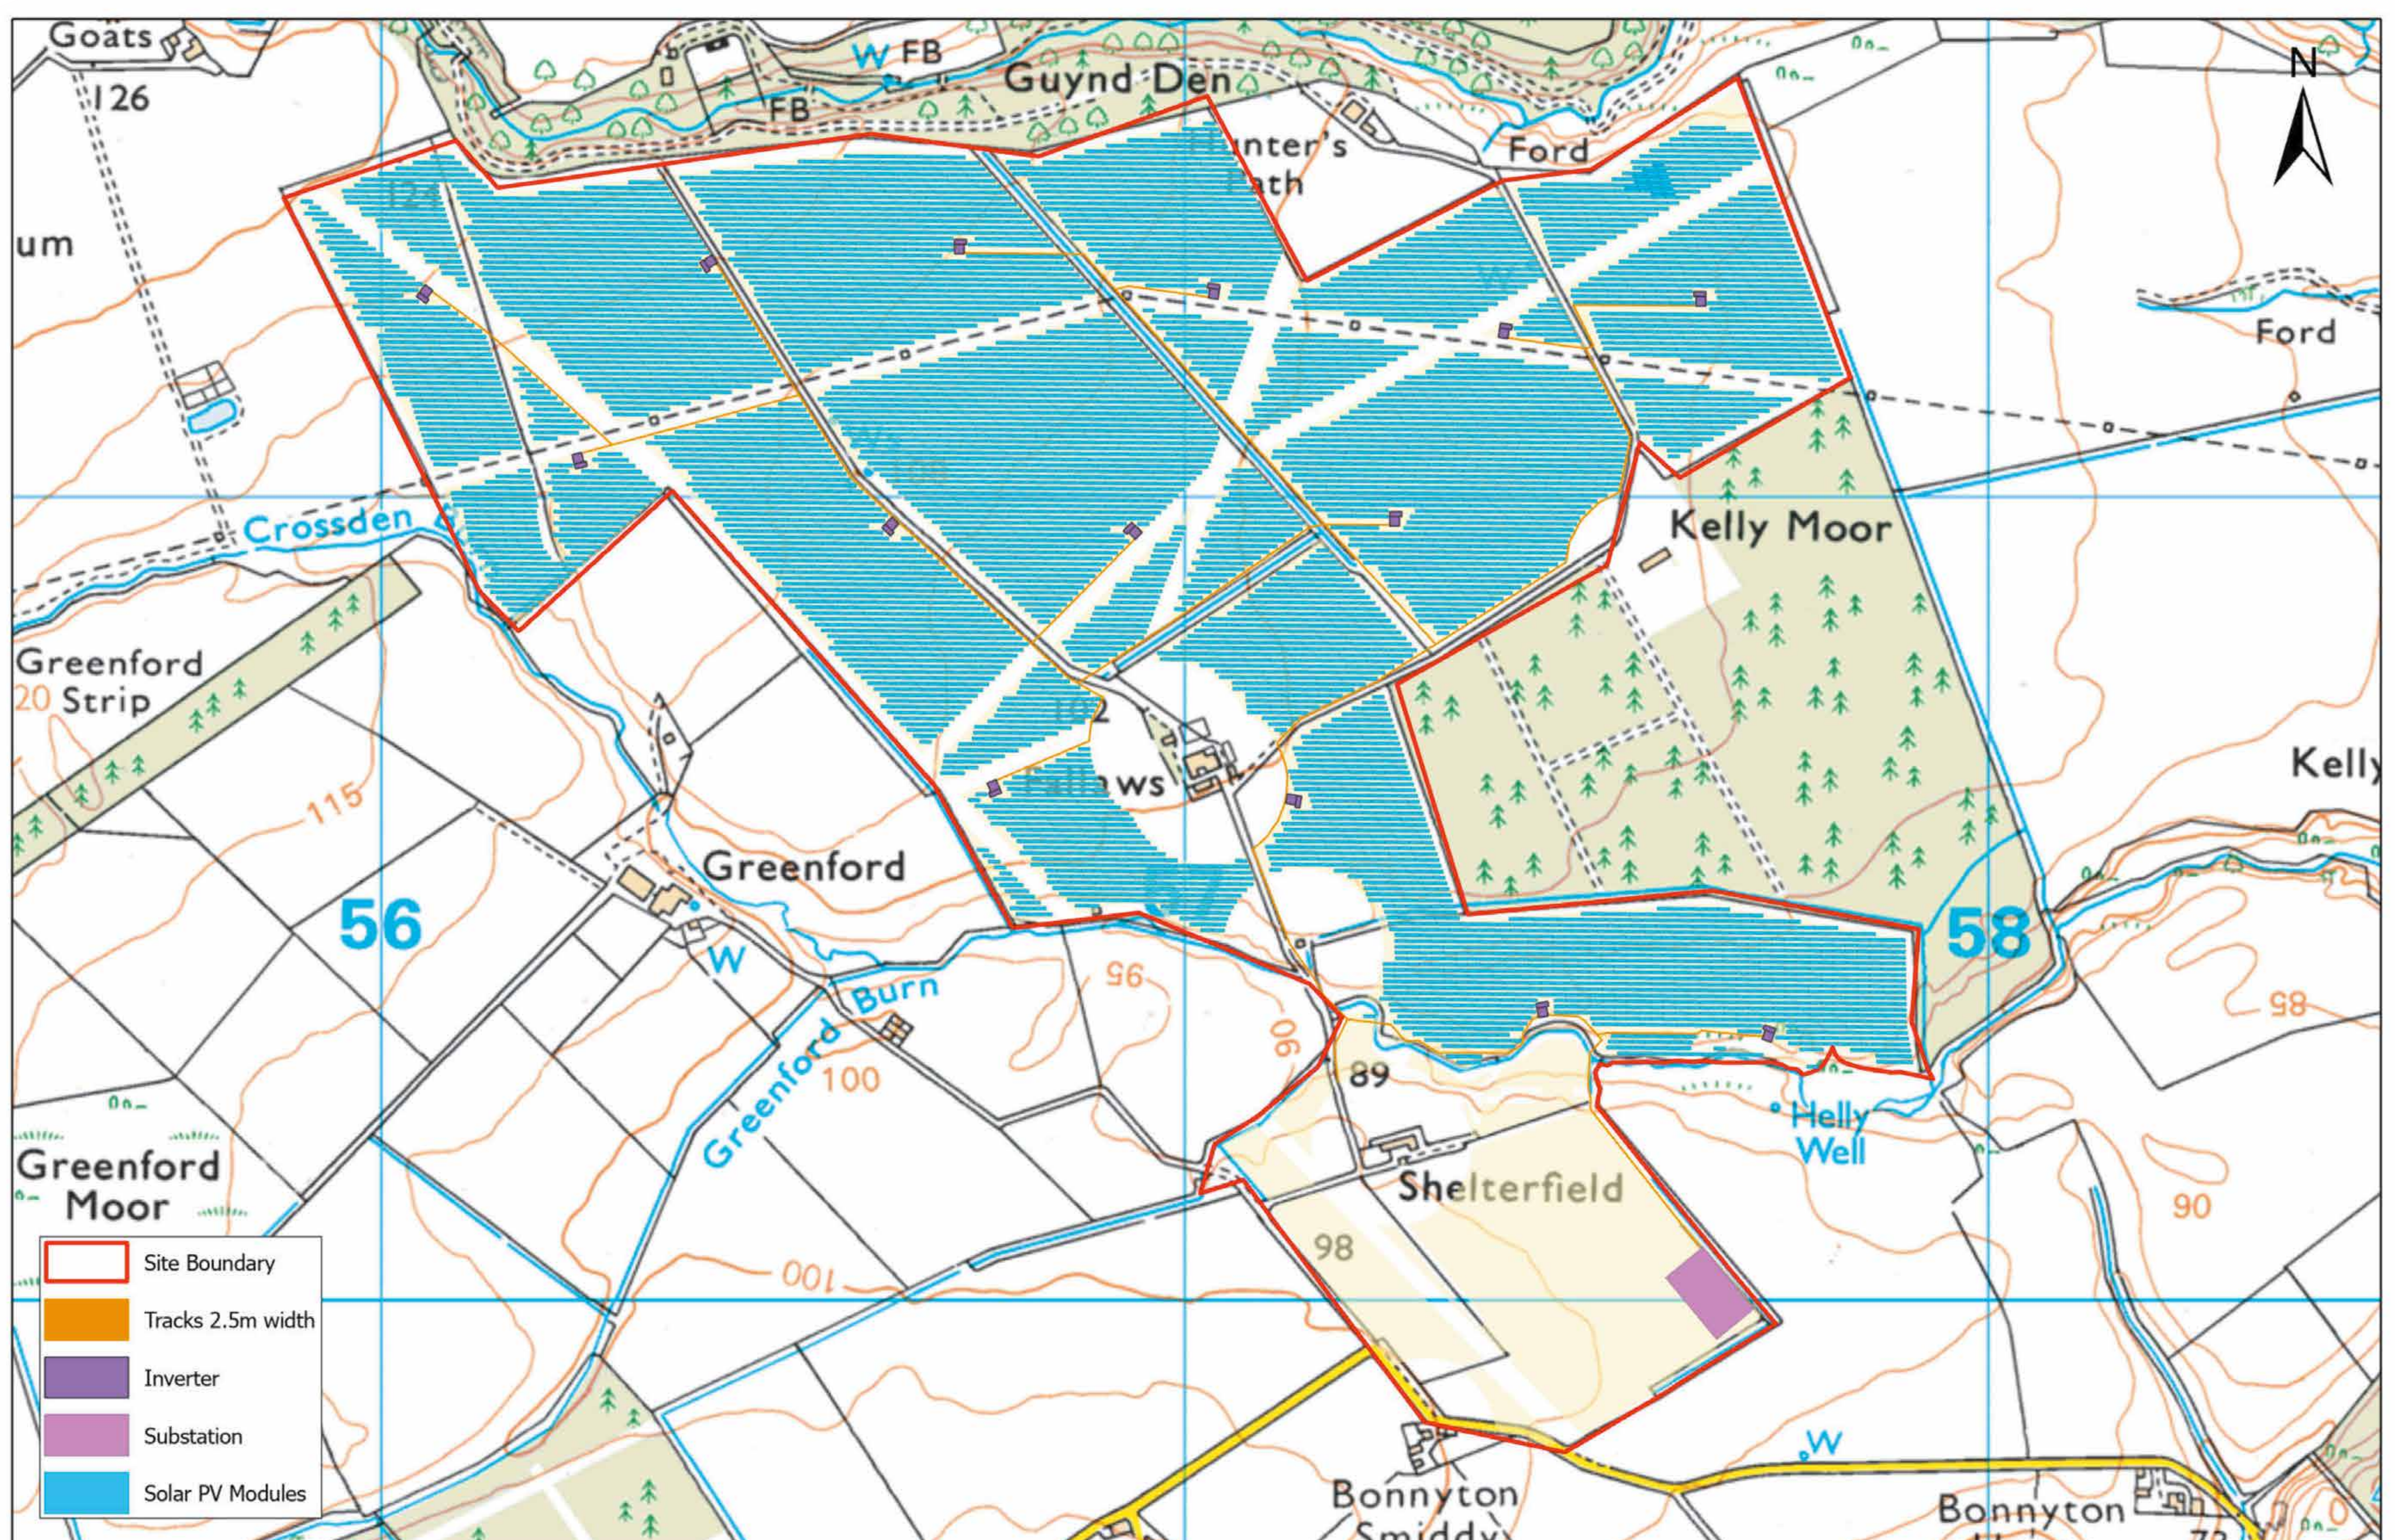

The plan below shows the preliminary layout for Bonnyknox Solar Farm.

The preliminary layout is based on initial findings from environmental and technical surveys which are ongoing. We are currently consulting on this layout and as such, it is subject to change.

The total number of panels and the height will be informed by ongoing surveys and assessments and feedback from the community and stakeholders and will be detailed in the planning application.

In addition to the solar panels, the site infrastructure is expected to include:

- A network of on-site access tracks
- A substation/transformer with security fencing
- Inverters on hardstandings
- Temporary construction compound(s)
- Deer fencing around the perimeter of the solar farm
- Landscaping and natural screening
